

- 1- The secret to the success of **Frontline** Plus is these powerful ingredients. Fipronil is an insecticide which kills adult fleas and ticks and methoprene is a regulator that prevents growth, stopping flea eggs from hatching and flea larvae from growing into mature fleas
- 2- What is the active ingredient in **Frontline** for cats?
FRONTLINE Plus has 2 tough killing ingredients.
The 1st, fipronil, kills adult fleas and ticks.
The 2nd, (S)-methoprene, attacks flea eggs and larvae. They work together to kill all month long.
- 3- How long does it take for fleas to die after **frontline**?
FRONTLINE Plus will spread over the coat of your pet within 24 hours and will continue to be effective for 8 weeks on dogs and 6 weeks on cats. Any fleas that jump onto your pet will die within 8-24 hours. Be aware, however that the adult fleas on your pet represent only 5% of the total flea population.
- 4- How do you apply **Frontline**?
Open Applicator: Hold upright with foil side toward you and snap applicator tip. Apply FRONTLINE Plus: Part your dog's hair between the shoulder blades. Place the applicator tip just above the skin and squeeze. Apply entire contents of the applicator in a single spot directly onto the animal's skin.
